(54) Title: GLUCOSE-CONTAINING PREPARATION

(54)発明の名称 プドウ糖含有製剤

## (57) Abstract

A neutral glucose-containing preparation having a pH value close to that of physiological saline and being excellent in stability, which is a transfusion preparation wherein the formation of glucose decomposition products us the by-product is suppressed and the content of formic acid is minimized. More particularly, a glucose-containing preparation composed of a solution 1 and a solution 2 packed separately. wherein: (a) the solution 1 contains 2 to 50 % of glucose and has a pH value regulated to 3 to 5 by an organic acid-based buffer; (b) the solution 2 contains an alkalifying agent and has a pH value of 8 to 13 as a pH regulating solution for the above solution 1; and (c) the preparation solution obtained by mixing the solution 1 with the solution 2 has a glucose concentration of 1 to 15 % and a pH value falling within a range of from 6 to 8. It is used, in particular, as peritoneal perfusates typified by one employed in CAPD (continuous ambulatory peritoneal dialysis).
